

Spring Tank-mix sheet

Revised October 2016

ATLANTIS[®]WG

Please note that physical compatibilities may not be approved tank-mixes. The tests do not check for any adverse crop phytotoxicity or for the biological efficacy of the individual components when applied in a tank-mix. Bayer CropScience gives no warranty and accepts no liability in respect of physical compatibilities; therefore, use is at grower's own risk.

Always check individual product labels for any possible restrictions before making a tank-mix recommendation.

In spring and for best results, Atlantis[®] WG + biopower[®] should be applied alone.

In soft crops avoid the use of tank-mix partners with the potential to cause crop damage when applied in tank-mix with an adjuvant. In particular, tank-mixes with EC fungicide formulations and HBN products (e.g. Buctril[®]) may result in transitory adverse crop effects.

DO NOT tank-mix Atlantis WG with chlorpyrifos and AVOID sequences as crop damage can occur resulting in significant yield loss. Where sequences are used, leave at least a 4 week gap between applications to minimise the risk of crop damage.

Tank-mixes with chlorothalonil containing products have been shown to reduce efficacy and are not supported by Bayer CropScience.

Add the recommended quantity of Atlantis WG to the spray tank half-filled with the required quantity of clean water. Add the remainder of the water with the sprayer agitation system in operation. **Always maintain agitation during mixing and loading and until spraying is complete. Spray immediately.**

Do not leave the sprayer standing with chemical in it. Always add biopower[®] to the spray tank last.

Bayer CropScience will support the physical compatibility of tank-mixes of Atlantis WG + biopower with only ONE of the products listed below.
